Alan –

I looked at it but there is not much there in the attached proposal – it seems just to be an outline of what they want to do.

My only suggestion would be to do a similar Ripstream analysis for prescriptions associated in NFB streams – no wait.... We have the results from studies from the 70's and 80's – temperatures are going to soar with a clearcut to the stream bank.

Peter, would you like to review this for ODF? I am going to take a look at it as well. I am not sure of the timeframe, but we could bring it up at our discussion on the 17th. Let me know if this works for you.

Alan

Subject: Input on ODF's monitoring strategy

Alan and Jeff,

I'm emailing you soliciting your agencies' input on our monitoring strategy (i.e., a prioritization of our implementation and effectiveness monitoring questions) I'm working on. We're requesting input on both methods to prioritize questions, and what monitoring questions you think are important to address on non-federal forest land.

I'm not sure I've got the right people in your respective agencies, so please forward this email on to folks you think may be most appropriate. I attached the workplan guiding the update, as well as the previous strategy to give a flavor of the work.

Thanks,

Terry
